## Comprehensive oil analysis program

May 1, 2023

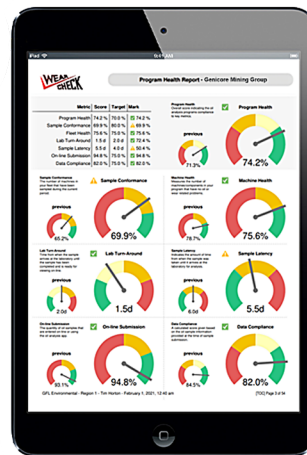

Link-Belt is now offering a comprehensive oil analysis program. We have partnered up with a leader in the oil analysis field to provide an all-inclusive kit that will deliver in-depth data on your machine's maintenance needs. **Track your machine's fluid health and search for harmful contaminants in your system before they become a problem.** The best way to prevent down-time is with a proactive maintenance test program.

To get started testing your machine, order a sample kit and pump through Link-Belt (refer to operator's manual for sample procedures). The cost of a sample kit includes the sample jar, sample materials, and the cost of your test. Once you have collected the sample, mail it to the lab. When the sample has been tested, you will receive the emailed results or you can view your results online. Through the online portal you can manage your samples, generate reports on your machines, and monitor the health of your fleet. Get the most out of what you put in your machine by keeping up to date on the status of your oil.

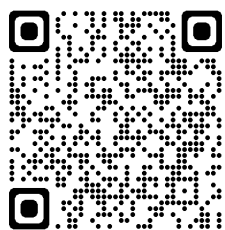

For additional information on the kits contact: [partsmarketing@linkbelt.com](mailto:partsmarketing@linkbelt.com)

ITEM	DESCRIPTION
